

Sucrafit

Sucrafit tablet 4 mg, 100 tablets

COMPOSITION: Sucralose 4 mg, mannitol, Ac-Disol, L-Leucin

MEDICAL PROPERTIES: Sucralose is obtained from sugar and is ~600-fold more sweet than sugar. Sucralose maintains its sweetening properties even under high temperatures (such as pasteurization and sterilization). Furthermore, sucralose is stable in foods until their expiration dates.

Approximately 15% of the sucralose consumed is absorbed. The remaining part of the sucralose goes through the digestive system unchanged and is eliminated by feces. A major portion of the absorbed dosage is excreted in urine unchanged within 24 hours. In prolonged use, pharmacokinetics of sucralose is unchanged. Clinical and animal studies showed that there is no accumulation.

RECOMMENDED AREAS OF USE: It is used for sweetening in individuals on a low-calorie diet and in diabetes patients.

CONDITIONS WHERE IT SHOULD NOT BE USED: It should not be used in individuals hypersensitive to any of the substances within the composition of the product.

WARNINGS AND PRECAUTIONS: Before use, read the package insert carefully. If there are any medicines you are currently using, it is imperative that you should report this to your physician or pharmacist.

SIDE EFFECTS / ADVERSE EFFECTS: In case of an unwanted effect\ report this to Ministry of Health Turkey Pharmacovigilance Center (TÜFAM).

DOSAGE AND ADMINISTRATION: Recommended daily dosage is 1,1 mg/kg/day.

STORAGE CONDITIONS: Keep in room temperature at <25° in its package away from the sight and reach of children.

AVAILABLE FORMS: SUCRAFİT 4 mg tablet, in 100 tablets plastic boxes.
